SUMMARY

I design products where many roles, rules and data meet. 6+ years designing for businesses, their customers and their employees in insurance, heavy industry, energy and internal tools: from discovery workshops and access models to design systems, accessibility and developer-ready handoff. With a degree in computer science, I speak developer. Recent results: a customer portal that won against dozens of vendors and is now live with 3 customers across dozens of mine sites, and WCAG 2.2 AA coverage raised from 65% to 93% across 5 verticals.

EXPERIENCE

Product Designer, Design lead

Andersen | Sep 2021 – Present

Project: TAKRAF Customer Portal (2026) | Industrial, B2B, web & mobile

- Took the portal from a pre-sale concept to a live product: two weeks of discovery workshops, a two-axis access model for 7 roles and 160+ screens in English and Spanish.
- My pre-sale concept was part of the proposal that won against dozens of vendors. The portal is live with 3 customers across dozens of mine sites.
- Proposed QR codes on machines: one scan instead of ~6 steps. They now ship on every new TAKRAF machine, and service requests come in fully online.

Project: Allianz Partners, allyz (2022 – 2025) | Insurtech, B2C, web & app

- Designed customer account management for the allyz web and app.
- Led accessibility ahead of the European Accessibility Act: one process for 5 verticals and 3 more designers, self-audits in Figma and fixes built into the Allyz Next design system.
- WCAG 2.2 AA coverage grew from 65% to 93%, with fixes in production before the June 2025 deadline.

Project: CleanConnect.ai (2025) | Energy, AI SaaS, B2B

- Designed new data-heavy features across 5 sub-products, from emissions monitoring and incidents to energy certificates.
- Concepts for client demos in 2–3 days instead of 1–2 weeks, interactive prototypes and 62+ pages of final UI within the existing design system.
- All features are live. Most concepts were approved in 1–2 review rounds, and partner demos built on them led to 2 pilot agreements. Method 22 inspection reports are now generated from video in minutes instead of hours.

Project: Andersen internal CRM (2021 – 2022) | Internal tools, B2E

- Lead designer for the company's CRM: team profitability calculator, roles and permissions, filters with saved templates for large tables.
- Set up research on the project, ran usability tests and managed junior designers.

Mentoring: designers at Andersen (ongoing) | Internal

- Assess designers at every stage of the theory programme, help with technical questions on their real projects and support them until they feel confident.

UX/UI Designer

Everlabs | May 2020 – Sep 2021

Projects: client sites, dashboards and internal tools | B2B, B2C, CRM, SaaS

- Business research and design for sites, dashboards and internal tools: UI kits, design styles, wireframes, prototypes and developer-ready designs.

PROJECTS & STUDY

Product Design course

Projector Institute | 2022

Team projects on real products: briefs from the companies, research with their real users, and solutions presented to and evaluated by their stakeholders.

Project: Liki24, pharmacy delivery platform | B2C e-commerce, team of 6 product designers

- Brief from Liki24: users added medicines to the cart and left at checkout. Conversion had fallen below 50%, and to around 30% after wartime curfews limited night delivery.
- Ran 5 of the team's 29 in-depth interviews with real users, mapped pains with CJM and the Value Proposition Canvas, and prioritised ideas by impact and feasibility.
- Turned them into 6 hypotheses with metrics, prototypes and usability tests: clear cart feedback, step-by-step delivery choice, a clearer pharmacy map and visible loading states. Target: 20–30% fewer checkout errors.
- Liki24's stakeholder selected the team's solutions for further development.

Project: Vchasno, e-document and e-signature platform | B2B SaaS, team of 5 product designers

- Brief from Vchasno, used by 500K+ companies: departments signed through one shared account, so per-user billing lost revenue.
- Mapped the product's objects and document flows with OOUX and BPMN before designing anything.
- On my own initiative, took on the more complex direction: group shortcuts that let any employee sign from their own account, with signature and access merged into one step. Both directions were prototyped and tested with users.
- Vchasno picked our solution as one of its top two options.

INDEPENDENT & COMMUNITY

Founder, My own product | Side project, startup from idea to pilot

- Took a product of my own from idea to a working app and a pilot, bringing 40 partners and 5 companies on board.

One-on-one mentoring | Independent

- Built a learning plan, lectures and a practice product for a designer starting out, reviewed her work and prepared her portfolio and interviews. She landed a design job after two months.

Organizer of design events, Game of Fonts (Sep 2020 – Feb 2022) | Design community, part-time

- Organised design competitions and events for a local design community, ran its social media and wrote articles.

SKILLS

Methods: Discovery workshops, stakeholder and user interviews, usability testing, UX research, JTBD, OOUX, BPMN, customer journey maps, Value Proposition Canvas, information architecture, user flows, UX/UI design, accessibility (WCAG 2.2 AA), localisation

Tools: Figma, design systems and variables, prototyping, FigJam, Miro, Jira, Confluence, HTML & CSS

EDUCATION

Bachelor's degree in Computer Science | Cherkasy State Technological University | 2020 – 2022

Product Design & UX Research | Projector Institute | 2022

Junior Specialist in Software Development | Cherkasy Polytechnic College | 2016 – 2020

LANGUAGES

Ukrainian: native | English: upper-intermediate (B2) | Polish: intermediate (B1)
